Objects (5)

Objects are the fundamental entities stored in Amazon S3. You can use **Amazon S3 inventory** ↗ to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. **Learn more** ↗

Permissions overview

Access

⚠ Public

Block public access (bucket settings)

Public access is granted to buckets and objects through access control lists (ACLs), bucket policies, access point policies, or all. In order to ensure that public access to all your S3 buckets and objects is blocked, turn on Block all public access. These settings apply only to this bucket and its access points. AWS recommends that you turn on Block all public access, but before applying any of these settings, ensure that your applications will work correctly without public access. If you require some level of public access to your buckets or objects within, you can customize the individual settings below to suit your specific storage use cases. **Learn more** ↗

Edit

Block *all* public access
⚠ Off

— **Block public access to buckets and objects granted through *new* access control lists (ACLs)**
⚠ Off

— **Block public access to buckets and objects granted through *any* access control lists (ACLs)**
⚠ Off

— **Block public access to buckets and objects granted through *new* public bucket or access point policies**
⚠ Off

— **Block public and cross-account access to buckets and objects through *any* public bucket or access point policies**
⚠ Off

Bucket policy

Bucket policy

Bucket policy

The bucket policy, written in JSON, provides access to the objects stored in the bucket. Bucket policies don't apply to objects owned by other accounts. **Learn more** ↗
